Total Project Cost:

\$600,000

Completion Date: 2001

Project Overview:

The initial phase of this project involved a condition survey of the roadway pavement, shoulders, pavement markings and drainage facilities on 10 miles of roadway comprising the campus circulation network. (State University Construction Fund, \$600,000, 2001)

SUNY at Old Westbury – Campus-Wide Road Rehabilitation Design Nassau County, NY

The initial phase of this project involved a condition survey of the roadway pavement, shoulders, pavement markings and drainage facilities on 10 miles of roadway comprising the campus circulation network.

The findings of the condition inspection were documented in a report and recommended over \$2 million of remedial work including:

- Pavement and shoulder reconstruction
- Resurfacing
- Crack sealing
- Drainage system improvements
- Pavement marking installation

The roadway renovation needs were prioritized and contract documents for the high priority items totaling \$600,000 in construction costs were prepared. The contract documents included maintenance of traffic and construction sequencing provisions to ensure that the impact of construction on campus activities were minimized.
